Alfa Romeo FURIA new concept is revealed. The project took almost 10 months. The FURIA name already exists in one of the old models of Alfa Romeo. This project is not a new generation of classic. Paul Breshke created it. He commented that it was a great pleasure to do this project and this feeling accompanied him all the way through design that resulted in rapid execution of the car. **While creating Alfa Romeo FURIA his main goal is to get inspiration from the majority of classic of the brand as much as possible.**

The fans should see lots of detailing which suggests them that from which car the inspiration comes from. **For instance, green lacquer color with orange detailing comes from Alfa Romeo Bertone Carabo; the horizontal fin is referred to the Alfa Romeo FURIA G1, Tipo 33-2 Daytona and Cuneo 33.** The shape of its body is referred to the Alfa Romeo GTV Spider and 33 Stradale. The delicate arches cutting plane has given the model an interesting character.

The front part the grille is the important part of the design of the new Alfa Romeo FURIA. It is integrated into the oval air intake in the old times. Assumptions of the project were to create a new super car which will refer through the styling to the spirit of the brand. **The model has lots of features which will show the rich history of Alfa Romeo. The fans of the brand will definitely find something for them.** You should not count much on convenience as it is a sports car. It has an interior for two people.
